

Fiona Brown

I have recently graduated from the course and am now seeking to become a Physiotherapist.

The teaching was first class, the lectures were explained in full depth and detailed. I found that the topic discussing Muscles, in particular the Origins & Insertions, was clearly demonstrated by the tutor with the use of a skeleton and actually drawing the insertions for students to see on a client.

Now having completed this course I have been accepted into the University of Essex and am looking to begin my Physiotherapy Degree. There was no way I could have got in without completing this course.

I found it easy to juggle my work life and study. This course has really changed my life.

Yianna Ioannou

This course is very easy to use, you don't have to be a computer wiz. The tutor giving the lectures is very good and it feels as if you are sitting in the classroom with her.

I like the fact that you are able to pause films to complete worksheets and that you can go back and watch films over again. I must have watched the skeletal lectures three times!!!

Overall, it's a very good course which is easy to use and well worth the money.

Carol Ward

I can honestly say that I've really enjoyed the A&P Virtual Classroom. I actually felt as if I was in the second row of students and the tutor explained everything in a very logical and lively way, I couldn't fail to be interested! The supporting online workbooks and information sheets were very useful. The ends of module tests were a good check that I'd both covered and understood each module before progressing to the next. Also, it was so useful being able to log in at a time that suited me. The virtual classroom really offers the best of all worlds!
